Giraffe is Lost is a chunky, interactive board book with fun novelties, cheerful illustrations, and repetitive text that encourages participation. Young children will enjoy helping Giraffe find his dad by going around the zoo lifting flaps and pulling sliders. They will meet a cast of characterful animals—including meerkats, monkeys, and a big gray elephant—and the pull-tabs and flaps reveal funny surprises. The repetitive text encourages kids to join in, and there is a happy and reassuring ending. A book that will become a favorite with little ones aged 18 months to three years. Rebecca Bender's hilarious Giraffe and Bird was an instant classic when it was first published in 2011, selling

10,000 copies in Canada alone. Since then children and their parents have giggled their way through a sequel, Don't Laugh at Giraffe (2012), and a prequel for younger readers, Giraffe Meets Bird (2015). Now, after several years out of print, the original story is rejoining its partners on the shelf in a sturdy, new trade edition with a padded cover. Giraffe and Bird are not friends. Not even a little bit. The bird pesters the giraffe with his face-making, feather-pruning, and disgusting eating habits. The giraffe annoys the bird with his bad breath, ear-swatting, and lack of respect for personal space. Of course they are always fighting. Of course they would be better off without each other. Except, it turns out, maybe they wouldn't be. With bold acrylic illustrations and laugh-out-loud storytelling, Rebecca Bender's bestselling debut will continue to delight children, adults, and friends of all kinds. Quietly, without most people noticing, the population of giraffes in the wild has decreased by nearly 40 percent since 1985. Giraffes have disappeared entirely from seven countries where they used to live. Researchers believe fewer than 98,000 exist in the wild—fewer even than endangered African elephants. In 2016, the International Union for the Conservation of Nature added giraffes to the organization's Red List of Threatened Species. What is causing their disappearance? Overpopulation of humans in giraffe habitats and illegal poaching. Learn about giraffes' physical characteristics, habitats, and life cycles; examine the dangers they face from humans and climate change; and meet the scientists working to save these gentle giants using technology and conservation efforts. Giraffe loves to laugh, but today he's cranky! All of Giraffe's friends want to cheer him up, but is laughter the best medicine for such a grumpy guy? The frog wants to know what it's like up where the giraffe is, but the giraffe can't hear what the frog is saying. So the frog jumps higher and higher and higher... onto the lion, the hippo, and the elephant. With its iconic appearance and historic popular appeal, the giraffe is the world's tallest living terrestrial animal and the largest ruminant. Recent years have seen much-needed new research undertaken to improve our understanding of this unique animal. Drawing together the latest research into one resource, this is a detailed exploration of current knowledge on the biology, behaviour and conservation needs of giraffe. Dagg highlights striking new data, covering topics such as species classification, the role of infrasound in communication, biological responses to external temperature changes and motherly behaviour and grief. The book discusses research into behaviour alongside practical information on captive giraffe, including diet, stereotypical behaviour, ailments and parasites, covering both problems and potential solutions associated with zoo giraffe. With giraffe becoming endangered species in Africa, the book ultimately focuses on efforts to halt population decline and the outlook for conservation measures. network studies from Laikipia Kenya, Etosha National Park, Namibia and Samburu National Reserve, Kenya Retells the true story of how the first giraffe ever to come to Europe was sent by the Pasha of Egypt to the King of France in 1826, and the giraffe walked from the disembarkation point of Marseilles to Paris to see the King. "Darwin (1871) and many African folk legends before him [...] proposed a simple but powerful explanation for the large and elongated shape. Long necks allowed giraffe to outreach presumed competitors, particularly during dry-season bottlenecks when leaves become scarce; (Simmons and Scheepers). However, this old African folk legend which is still commonly taught in high schools, fails to explain, among other things, the size differences between males and females. Giraffe cows are up to 1.5 meters shorter than the giraffe bulls, not to mention the offspring. The wide migration range of the giraffe and the low heights of the most common plants in their diet likewise argue against the dominant selection hypothesis. Also:

- 1) The fossil "links," which according to the theory should appear successively and replace each other, usually exist simultaneously for long periods of time.
- 2) Evolutionary derivations based on similarities rely on circular reasoning.
- 3) The giraffe has eight cervical vertebrae. Although the 8th vertebra displays almost all the characteristics of a neck vertebra, as an exception to the rule the first rib pair is attached there.
- 4) The origin of the long-necked giraffe by a macromutation is, due to the many synorganized structures, extremely improbable.
- 5) Sexual selection also lacks a mutational basis and, what is more, is frequently in conflict with natural selection ("head clubbing" is probably "a consequence of a long neck and not a cause"; see also Mitchell et al. 2009).
- 6) In contrast to the thus-far proposed naturalistic hypotheses, the intelligent design theory is basically testable.
- 7) The long-necked giraffes possibly all belong to the same basic type inasmuch as
- 8) a gradual evolution from the short-necked to the long-necked giraffe is ruled out by the duplication of a neck vertebra and the loss of a thoracic vertebra.
- 9) Chance mutations are principally not sufficient to explain the origin of the long-necked giraffe.
- 10) The intelligent design theory offers an adequate and satisfying solution to the problems and points to numerous

"old" and new research projects. 11) Mitchell and Skinner present a good analysis of the selectionist problem; however, their phylogenetic hypotheses presuppose the correctness of the synthetic evolutionary theory, and their claims of "intermediate forms" are unproven (similarly summary Part 2). Part 1 shows why Dawkins and Kutschera are wrong. The scientific facts speak for design." THE NO.1 LADIES' DETECTIVE AGENCY introduced the world to the one and only Precious Ramotswe - the engaging and sassy owner of Botswana's only detective agency. TEARS OF THE GIRAFFE, McCall Smith's second book, takes us further into this world as we follow Mama Ramotswe into more daring situations ... Among her cases this time are wayward wives, unscrupulous maids, and the challenge to resolve a mother's pain for her son who is long lost on the African plains. Indeed, Mma Ramotswe's own impending marriage to the most gentlemanly of men, Mr J.L.B. Matekoni, the promotion of Mma's secretary to the dizzy heights of Assistant Detective, and the arrival of new members to the Matekoni family, all brew up the most humorous and charmingly entertaining of tales. * TEARS OF THE GIRAFFE was selected as one of the GUARDIAN's top ten 'Fiction Paperbacks of the Year, 2000 Kleurenfoto's en een beknopte tekst laten het leven van een giraffe zien. Vanaf ca. 6 jaar. In the 1950s, Anne Innis Dagg was a young zoologist with a lifelong love of giraffe and a dream to study them in Africa. Based on extensive journals and letters home, Pursuing Giraffe vividly chronicles the realization of that dream and the year that she spent studying and documenting giraffe behaviour. Dagg was one of the first zoologists to study wild animals in Africa (before Jane Goodall and Dian Fossey); her memoir captures her youthful enthusiasm for her journey, as well as her naïveté about the complex social and political issues in Africa. Once in the field, she recorded the complexities of giraffe social relationships but also learned about human relationships in the context of apartheid in South Africa and colonialism in Tanganyika (Tanzania) and Kenya. Hospitality and friendship were readily extended to her as a white woman, but she was shocked by the racism of the colonial whites in Africa. Reflecting the twenty-three-year-old author's response to an "exotic" world far removed from the Toronto where she

grew up, the book records her visits to Zanzibar and Victoria Falls and her climb of Mount Kilimanjaro. Pursuing Giraffe is a fascinating account that has much to say about the status of women in the mid-twentieth century. The book's foreword by South African novelist Mark Behr (author of The Smell of Apples and Embrace) provides further context for and insights into Dagg's narrative. A delightful addition to the best-selling 'That's Not My'... series. Babies and toddlers will love turning the pages, touching the feely patches and spotting the familiar little white mouse as they look for their giraffe. Illustrations: Full colour throughout If you had a giraffe and he stretched another half ... you would have a giraffe and a half. And if you glued a rose to the tip of his nose ... And ... if he put on a shoe and then stepped in some glue ... And if he used a chair to comb his hair ... And so it goes until ... but that would be telling. Children will be kept in stitches until the very end, when the situation is resolved in the most riotous way possible. Shel Silverstein's incomparable line drawings add to the hilarity of his wildly funny rhymes. Zeer geschikt voor middelbare school of basisschool. wit papier zwarte lijntjes (inclusief voorlijn) 150 pagina's glanzende soft-cover uit de serie jonge dieren In October 1826, a ship arrived at Marseille carrying the first giraffe ever seen in France. A royal offering from Muhammad Ali, Ottoman Viceroy of Egypt, to King Charles X, she had already traveled 2,000 miles down the Nile to Alexandria, from where she had sailed across the Mediterranean standing in the hold, her long neck and head protruding through a hole cut in the deck. In the spring of 1827, after wintering in Marseille, she was carefully walked 550 miles to Paris to the delight of thousands of

onlookers. The viceroy's tribute was politically motivated: He commanded the Turkish forces then fighting the Greeks in their war of independence, and hoped his gift would persuade the French not to intervene against him. But the viceroy and his intentions were quickly forgotten as France fell in love with its "beautiful stranger." Zarafa chronicles the full story of this remarkable animal, revealing a kaleidoscope of history, science, and culture that opens an exotic window on the early nineteenth century. From the Enlightenment's blossoming fascination with science to Napoleon's ill-fated invasion of Egypt in 1798—from the eminent French naturalist Étienne Geoffroy Saint-Hilaire to Bernardino Drovetti, French consul general in Egypt and tomb robber extraordinaire—the era was full of memorable events and characters. Michael Allin deftly weaves them into the story with an appreciation for detail and an uncommon affection. The giraffe's strange and wonderful journey linked Africa and Europe in mutual discovery. Although her arrival did not keep the French out of Ali's war, she became an instant celebrity in Paris and over the next eighteen years she fascinated all of Europe. Through Michael Allin's narrative skill, Zarafa stirs the imagination as it provides a new context for the history of a distant age.
