In multidisciplinary efforts to understand and manage our planet, contemporary ocean science plays an essential role. Volumes 13 and 14 of *The Sea* focus on two of the most important components in the field of ocean science today—the coastal ocean and its interactions with the deep sea, and coupled physical-biogeochemical and ecosystem dynamics. Approach your problems

from the right end and begin with the answers. Then one day, perhaps you will find the final answer. "The Hermit Clad In Crane Feathers" In R. van Gullk's The Chinese Haze Hurders. It Isn't that they can't see the solution. It IS that they can't see the problem. G. K. Chesterton. The Scandal of Father Brown. "The P0int of a Pin." Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics. However, the "tree" of knowledge of mathematics and related fields does not grow only by putting forth new branches. It also happens, quite often in fact, that branches which were thought to be completely disparate are suddenly seen to be related. Further, the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years: measure theory is used (non-trivially) in regional and theoretical economics; algebraic geometry interacts with physics; the Minkowsky lemma, CODing theory and the structure of water meet one another in packing and

covering theory; quantum fields, crystal defects and mathematical programming profit from homotopy theory; Lie algebras are relevant to filtering; and prediction and electrical engineering can use Stein spaces. And In addition to this there are such new emerging subdisciplines as "experimental mathematics", "CFD", "completely Integrable systems", "chaos, synergetics and large-scale order", which are almost impossible to fit into the eXisting classificatIOn schemes. Laminated Composite Plates and Shells presents a systematic and comprehensive coverage of the three-dimensional modelling of these structures. It uses the state space approach to provide novel tools for accurate three-dimensional analyses of thin and thick structural components composed of laminated composite materials. In contrast to the traditional treatment of laminated materials, the state space method guarantees a continuous interfacial stress field across material boundaries. Other unique features of the analysis include

the non-dependency of a problem's degrees of freedom on the number of material layers of a laminate. Apart from the introductions to composite materials, three-dimensional elasticity and the concept of state space equations presented in the first three chapters, the book reviews available analytical and numerical three-dimensional state space solutions for bending, vibration and buckling of laminated composite plates and shells of various shapes. The applications of the state space method also include the analyses of piezoelectric laminates and interfacial stresses near free edges. The book presents numerous tables and graphics that show accurate three-dimensional solutions of laminated structural components. Many of the numerical results presented in the book are important in their own right and also as test problems for validating new numerical methods. Laminated Composite Plates and Shells will be of benefit to all materials and structural engineers looking to understand the detailed behaviour of these important materials. It will also interest academic

scientists researching that behaviour and engineers from more specialised fields such as aerospace which are becoming increasingly dependent on composites. Synthetische visie van de Franse r.k. theoloog en paleontoloog (1881-1955) die binnen natuurwetenschappelijke grenzen het ontstaan van de mens en zijn evolutie tot volledige vergeestelijking beschrijft. Everyone working in a problem as complex as continental drift, must at some time have felt the need for an objective data summary in fields other than his own. It is a scientific dilemma that, although there is evident need for researchers with competence in many fields (the classical natural scientist), the time involved in acquiring such broad experience is so great as to render the task largely impossible. The alternative seems to be the team approach, and we have espoused it in this volume. Editors and contributors alike have tried in this book to keep the accent upon factual information and to reduce interpretation to a minimum. Interpretation there must be, however, since without it science is but an

intellectual pastime comparable to  
unilaterally. The librarian's need to  
classify results in the appearance of our  
names upon the spine of this volume,  
however, we would like to make it clear  
that the book has been a truly cooperative  
effort and could not have succeeded but  
for the active help of the individual  
contributors, whose assistance seldom was  
restricted to their chapters. Special  
thanks must be given to our South American  
colleagues, for the tolerance with which  
they viewed our editorial attempts, and to  
Dr. E. Machens, for his careful review of  
the translation of his manuscript. We  
wish also to acknowledge the help of Dr.  
C. W. The bestselling guide to the best  
deals on all of baby's needs is now  
revised and updated to cover such topics  
as how to avoid wasting money with baby  
clothes, which brands are the best, the  
ten best baby gifts, reviews on toys,  
monitors, diapers, and much more.

Introduction gives full biographical notes and assessment of Rae's arctic journeys and discoveries in relation to contemporary explorations. This set of essays highlights the state of the art in the linguistics of Iranian languages. This edition has been extensively updated, with new information on Web sites, outlets, and

freebies. Includes a CD-ROM. Photos. Charts. Statistical literacy is critical for the modern researcher in Physics and Astronomy. This book empowers researchers in these disciplines by providing the tools they will need to analyze their own data. Chapters in this book provide a statistical base from which to approach new problems, including numerical advice and a profusion of examples. The examples are engaging analyses of real-world problems taken from modern astronomical research. The examples are intended to be starting points for readers as they learn to approach their own data and research questions. Acknowledging that scientific progress now hinges on the availability of data and the possibility to improve previous analyses, data and code are distributed throughout the book. The JAGS symbolic language used throughout the book makes it easy to perform Bayesian analysis and is particularly valuable as readers may use it in a myriad of scenarios through slight modifications. This book is comprehensive, well written, and will surely be regarded as a standard text in

both astrostatistics and physical statistics. Joseph M. Hilbe, President, International Astrostatistics Association, Professor Emeritus, University of Hawaii, and Adjunct Professor of Statistics, Arizona State University
