Hacker's Challenge 3 Jun 23 2020 The stories about phishing attacks against banks are so true-to-life, it's chilling." --Joel Dubin, CISSP, Microsoft MVP in Security Every day, hackers are devising new ways to break into your network. Do you have what it takes to stop them? Find out in Hacker's Challenge 3. Inside, top-tier security experts offer 20 brand-new, real-world network security incidents to test your computer forensics and response skills. All the latest hot-button topics are covered, including phishing and pharming scams, internal corporate hacking, Cisco IOS, wireless, iSCSI storage, VoIP, Windows, Mac OS X, and UNIX/Linux hacks, and much more. Each challenge includes a detailed explanation of the incident--how the break-in was detected, evidence and clues, technical background such as log files and network maps, and a series of questions for you to solve. In Part II, you'll get a detailed analysis of how the experts solved each incident. Excerpt from "Big Bait, Big Phish": The Challenge: "Could you find out what's going on with the gobi web server? Customer order e-mails aren't being sent out, and the thing's chugging under a big load..." Rob e-mailed the development team reminding them not to send marketing e-mails from the gobi web server.... "Customer service is worried about some issue with tons of disputed false orders..." Rob noticed a suspicious pattern with the "false" orders: they were all being delivered to the same P.O. box...He decided to investigate the access logs. An external JavaScript file being referenced seemed especially strange, so he tested to see if he could access it himself... The attacker was manipulating the link parameter of the login.pl application. Rob needed to see the server side script that generated the login.pl page to determine the purpose.... The Solution: After reviewing the log files included in the challenge, propose your assessment: What is the significance of the attacker's JavaScript file? What was an early clue that Rob missed that might have alerted him to something being amiss? What are some different ways the attacker could have delivered the payload? Who is this attack ultimately targeted against? Then, turn to the experts' answers to find out what really happened.

Network Infrastructure Security Jul 17 2022 Research on Internet security over the past few decades has focused mainly on information assurance, issues of data confidentiality and integrity as explored through cryptograph algorithms, digital signature, authentication code, etc. Unlike other books on network information security, Network Infrastructure Security addresses the emerging concern with better detecting and preventing routers and other network devices from being attacked or compromised. Network Infrastructure Security bridges the gap between the study of the traffic flow of networks and the study of the actual network configuration. This book makes effective use of examples and figures to illustrate network infrastructure attacks from a theoretical point of view. The book includes conceptual examples that show how network attacks can be run, along with appropriate countermeasures and solutions.

Secrets of a Cyber Security Architect Jan 31 2021 Any organization with valuable data has been or will be attacked, probably successfully, at some point and with some damage. And, don't all digitally connected organizations have at least some data that can be considered "valuable"? Cyber security is a big, messy, multivariate, multidimensional arena. A reasonable "defense-in-depth" requires many technologies; smart, highly skilled people; and deep and broad analysis, all of which must come together into some sort of functioning whole, which is often termed a security architecture. *Secrets of a Cyber Security Architect* is about security architecture in practice. Expert security architects have dozens of tricks of their trade in their kips. In this book, author Brook S. E. Schoenfield shares his tips and tricks, as well as myriad tried and true bits of wisdom that his colleagues have shared with him. Creating and implementing a cyber security architecture can be hard, complex, and certainly frustrating work. This book is written to ease this pain and show how to express security requirements in ways that make the requirements more palatable and, thus, get them accomplished. It also explains how to surmount individual, team, and organizational resistance. The book covers: What security architecture is and the areas of expertise a security architect needs in practice The relationship between attack methods and the art of building cyber defenses Why to use attacks and how to derive a set of mitigations and defenses Approaches, tricks, and manipulations proven successful for practicing security architecture Starting, maturing, and running effective security architecture programs Secrets of the trade for the practicing security architect Tricks to surmount typical problems Filled with practical insight, *Secrets of a Cyber Security Architect* is the desk reference every security architect needs to thwart the constant threats and dangers confronting every digitally connected organization.

Information Security and Digital Forensics Jan 11 2022 ISDF 2009, the First International Conference on Information Security and Digital Forensics, was held at City University London during September 7-8, 2009. The conference was organized as a meeting point for leading national and international - perts of information security and digital forensics. The conference was rewarding in many ways; ISDF 2009 was an exciting and vibrant event, with 4 keynote talks, 25 invited talks and 18 full-paper presentations and those attending had the opportunity to meet and talk with many distinguished people who are responsible for shaping the area of

information security. This conference was organized as part of two major research projects funded by the UK Engineering and Physical Sciences Research Council in the areas of Security and Digital Forensics. I would like to thank all the people who contributed to the technical program. The most apparent of these are the Indian delegates who all accepted our invite to give presentations at this conference. Less apparent perhaps is the terrific work of the members of the Technical Program Committee, especially in reviewing the papers, which is a critical and time-consuming task. I would like to thank Raj Rajarajan (City University London) for making the idea of the ISDF 2009 conference a reality with his hard work. Last but not least, I would like to thank all the authors who submitted papers, making the conference possible, and the authors of accepted papers for their cooperation. Dasun Weerasinghe
