In lucid and engaging prose, the book explores the sources of classical music's power in a variety of settings, from concert performance to film and TV, from everyday life to the historical trauma of September 11. Addressed to a wide audience, this book will appeal to aficionados and skeptics alike. Combined and modified edition of: *Humanities: culture, continuity & change*. 2nd ed. 2012. Examines the variety of treatments of the theme of death in the works of painters, sculptors, novelists, poets, and composers. "Humanities through the Arts" is intended for introductory-level, interdisciplinary courses offered across the curriculum in the Humanities, Philosophy, Art, English, Music, and Education departments. Arranged topically by art form from painting, sculpture, photography, and architecture to literature, music, theater, film, and dance. This beautifully illustrated text helps students learn how to actively engage a work of art. The new sixth edition retains the popular focus on the arts as an expression of cultural and personal values.. This volume examines the crisis of humanities narratives in the context of neoliberal capitalism and of the emergence and consolidation of

the metrics-driven, corporate, managerial university. Do narratives of the crisis of the humanities mobilize specific notions of value and prestige? How are these notions classed, gendered and racialized? How do narratives of the crisis of the humanities relate to current debates and contestations surrounding decolonization? Does the crisis of a traditional configuration of the humanities open up opportunities to use their institutional space for work that is both socially and politically relevant and academically rigorous? The aim is to provide a counter-narrative of the present and future of the humanities. In addition to the study of a multiplicity of media texts and other multimodal expressive forms, formats and platforms and genres, a communicative turn in the humanities entails deepening the study of the value chains in which they are inserted and their conditions of production, circulation and reception. Communicative and digital capitalism, now labelled the Fourth Industrial Revolution, is on its way to bringing its own waves of struggles and confrontations to our campuses and beyond, to which humanities scholars and activists can make a vital contribution—should some of us decide to do so. This book will be of interest to researchers and advanced students of art, literature, media and cultural studies, education, politics, sociology, and social and cultural anthropology. The chapters in this book were originally published in the journal *Critical Arts: South-North Cultural and Media Studies*. In an era of attacks on the humanities by the right ("Goethe is not taught anymore!") and the left ("Why teach dead white males?"), a distinguished teacher

and scholar presents a series of closely interconnected exercises in understanding the present state and future possibilities of the humanities. This book draws on both traditional and emerging fields of study to consider consider what a grounded definition of quantitative and qualitative research in the Digital Humanities (DH) might mean; which areas DH can fruitfully draw on in order to foster and develop that understanding; where we can see those methods applied; and what the future directions of research methods in Digital Humanities might look like.

Schuster and Dunn map a wide-ranging DH research methodology by drawing on both 'traditional' fields of DH study such as text, historical sources, museums and manuscripts, and innovative areas in research production, such as knowledge and technology, digital culture and society and history of network technologies. Featuring global contributions from scholars in the United Kingdom, the United States, Europe and Australia, this book draws together a range of disciplinary perspectives to explore the exciting developments offered by this fast-evolving field. Routledge International Handbook of Research Methods in Digital Humanities is essential reading for anyone who teaches, researches or studies Digital Humanities or related subjects. In the past three decades, feminist scholars have produced an extraordinary rich body of theoretical writing in humanities and social science disciplines. This revised and updated second edition of *Theorizing Feminism: Parallel Trends in the Humanities and Social Sciences*, is a genuinely interdisciplinary anthology of significant contributions to feminist theory. This timely reader is creatively edited, and contains insightful introductory material. It illuminates the historical development of feminist theory as well as the current state of the field. Emphasizing common themes and interests in the humanities and social sciences, the editors have chosen topics that remain relevant to current debates, reflect the interests of a diverse community of thinkers, and have been central to feminist theory in many disciplines. The contributors include leading figures from the fields of psychology, literary criticism, sociology,

philosophy, anthropology, art history, law, and economics. This is the ideal text for any advanced course on interdisciplinary feminist theory, one that fills a long-standing gap in feminist pedagogy. The second edition of *Writing That Makes Sense* takes students through the fundamentals of the writing process and explores the basic steps of critical thinking. Drawing upon over twenty years of experience teaching college composition and professional writing, David S. Hogsette combines relevant writing pedagogy and practical assignments with the basics of critical thinking to provide students with step-by-step guides for successful academic writing in a variety of rhetorical modes. New in the second edition: -Expanded discussion of how to write effective thesis statements for informative, persuasive, evaluative, and synthesis essays, including helpful thesis statement templates. -Extensive templates introducing students to conventions of academic discourse, including integrating outside sources, interacting with other writers' ideas, and dialoguing with multiple perspectives. -Examples of academic writing from different disciplines illustrating essay titles, abstracts, thesis statements, introductions, conclusions, and voice. -Expanded discussion of voice in academic writing, including an exploration of active and passive voice constructions in different disciplines and tips on how to edit for clarity. -A new chapter on writing in the disciplines. -Updated sample student papers. -New readings with examples of opposing views and multiple perspectives. This highly-anticipated volume has been extensively revised to reflect

changes in technology, digital humanities methods and practices, and institutional culture surrounding the valuation and publication of digital scholarship. A fully revised edition of a celebrated reference work, offering the most comprehensive and up-to-date collection of research currently available in this rapidly evolving discipline Includes new articles addressing topical and provocative issues and ideas such as retro computing, desktop fabrication, gender dynamics, and globalization Brings together a global team of authors who are pioneers of innovative research in the digital humanities Accessibly structured into five sections exploring infrastructures, creation, analysis, dissemination, and the future of digital humanities Surveys the past, present, and future of the field, offering essential research for anyone interested in better understanding the theory, methods, and application of the digital humanities How does technology impact research practices in the humanities? How does digitisation shape scholarly identity? How do we negotiate trust in the digital realm? What is scholarship, what forms can it take, and how does it acquire authority? This diverse set of essays demonstrate the importance of asking such questions, bringing together established and emerging scholars from a variety of disciplines, at a time when data is increasingly being incorporated as an input and output in humanities sources and publications. Major themes addressed include the changing nature of scholarly publishing in a digital age, the different kinds of 'gate-keepers' for scholarship, and the difficulties of effectively assessing the impact of digital resources. The

essays bring theoretical and practical perspectives into conversation, offering readers not only comprehensive examinations of past and present discourse on digital scholarship, but tightly-focused case studies. This timely volume illuminates the different forces underlying the shifting practices in humanities research today, with especial focus on how humanists take ownership of, and are empowered by, technology in unexpected ways. *Digital Technology and the Practices of Humanities Research* is essential reading for scholars, students, and general readers interested in the changing culture of research practices in the humanities, and in the future of the digital humanities on the whole. This book addresses the application of computing to cultural heritage and the discipline of Digital Humanities that formed around it. Digital Humanities research is transforming how the Human record can be transmitted, shaped, understood, questioned and imagined and it has been ongoing for more than 70 years. However, we have no comprehensive histories of its research trajectory or its disciplinary development. The authors make a first contribution towards remedying this by uncovering, documenting, and analysing a number of the social, intellectual and creative processes that helped to shape this research from the 1950s until the present day. By taking an oral history approach, this book explores questions like, among others, researchers' earliest memories of encountering computers and the factors that subsequently prompted them to use the computer in Humanities research. *Computation and the Humanities* will be an essential read for cultural

and computing historians, digital humanists and those interested in developments like the digitisation of cultural heritage and artefacts. This book is open access under a CC BY-NC 2.5 license Every day, more and more kinds of historical data become available, opening exciting new avenues of inquiry but also new challenges. This updated and expanded book describes and demonstrates the ways these data can be explored to construct cultural heritage knowledge, for research and in teaching and learning. It helps humanities scholars to grasp Big Data in order to do their work, whether that means understanding the underlying algorithms at work in search engines or designing and using their own tools to process large amounts of information. Demonstrating what digital tools have to offer and also what 'digital' does to how we understand the past, the authors introduce the many different tools and developing approaches in Big Data for historical and humanistic scholarship, show how to use them, what to be wary of, and discuss the kinds of questions and new perspectives this new macroscopic perspective opens up. Originally authored 'live' online with ongoing feedback from the wider digital history community, Exploring Big Historical Data breaks new ground and sets the direction for the conversation into the future. Exploring Big Historical Data should be the go-to resource for undergraduate and graduate students confronted by a vast corpus of data, and researchers encountering these methods for the first time. It will also offer a helping hand to the interested individual seeking to make sense of genealogical data or digitized newspapers, and even

the local historical society who are trying to see the value in digitizing their holdings. A new edition of a book for anyone who wants to learn programming to explore and create, with exercises and projects to help readers learn by doing. This book introduces programming to readers involved with the arts and humanities; there are no prerequisites, and no previous knowledge of programming is assumed. Nick Montfort reveals programming to be not merely a technical exercise within given constraints but a tool for sketching, brainstorming, and inquiry. He emphasizes programming's exploratory potential--its facility to create new kinds of artworks and to probe data for new ideas. The book is designed to be read alongside the computer, allowing readers to program while making their way through the chapters. It offers practical exercises in writing and modifying code and outlines "free projects" that allow learners to pursue their own interests. For two semester/quarter courses on Introduction to the Humanities or Cultural Studies. The Humanities by Henry M. Sayre helps students see context and make connections across the humanities by tying together the entire cultural experience through a narrative storytelling approach. Henry Sayre took the introduction to the humanities course as a sophomore and was inspired to devote his life to the study of the humanities. He has always wanted to write a book that passes along the important and compelling stories of the humanities. Henry believes that students learn best by remembering stories, not by memorizing facts. What makes The Humanities special is that it tells the stories and captures the voices that have shaped and influenced human thinking and

creativity. Please visit www.prenhall.com/thehumanities for more information and to view a video from author Henry Sayre, take a tour of a chapter from the book and see a demo of the Prentice Hall Digital Arts Library. For one semester/quarter courses on Introduction to the Humanities or Cultural Studies. Now in full color, Arts and Culture provides an introduction to global civilizations and their artistic achievements, history, and cultures. The authors consider two important questions: What makes a work a masterpiece of its type? And what qualities of a work enable it to be appreciated over time? Critical thinking is also highlighted throughout the text with 4 different box features that ask students to explore connections across the humanities and different cultures. These boxes are entitled Connections, Cross Currents, Then & Now, and Cultural Impact boxes. Open the new fourth edition of Arts and Culture and open a world of discovery. This Books la Carte Edition is an unbound, three-hole punched, loose-leaf version of the textbook and provides students the opportunity to personalize their book by incorporating their own notes and taking online the portion of the book they need to class -- all at a fraction of the bound book price. Text for the integrated humanities, the arts of literature, painting, music, sculpture, photography, architecture, and film, and the discipline of philosophy ... The components of the humanities ... are presented not as separate technical disciplines but as interrelated manifestations of human creativity. Moreover, they are studied within the context of important developments in science,

technology, economics and politics ... There is more than enough material for a two-semester course based entirely on the text, alternatively, the book can be used as a central text embellished by additional primary sources.-Pref. Information and Knowledge Organisation explores the role of knowledge organisation in the digital humanities. By focusing on how information is described, represented and organised in both research and practice, this work furthers the transdisciplinary nature of digital humanities. Including contributions from Asia, Australia, Europe, North America and the Middle East, the volume explores the potential uses of, and challenges involved in, applying the organisation of information and knowledge in the various areas of Digital Humanities. With a particular focus on the digital worlds of cultural heritage collections, the book also includes chapters that focus on machine learning, knowledge graphs, text analysis, text annotations and network analysis. Other topics covered include: semantic technologies, conceptual schemas and data augmentation, digital scholarly editing, metadata creation, browsing, visualisation and relevance ranking. Most importantly, perhaps, the book provides a starting point for discussions about the impact of information and knowledge organisation and related tools on the methodologies used in the Digital Humanities field. Information and Knowledge Organisation is intended for use by researchers, students and professionals interested in the role information and knowledge organisation plays in the Digital Humanities. It will be essential reading for those working in library and information science, computer science and across the

humanities. The Open Access version of this book, available at www.taylorfrancis.com, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license. Essays in this volume demonstrate how science fiction can serve as a bridge between the sciences and the humanities. The essays show how early writers like Dante and Mary Shelley revealed a gradual shift toward a genuine understanding of science; how H.G. Wells first showed the possibilities of combining scientific and humanistic perspectives; how writers influenced by Gernsback's ideas, like Isaac Asimov, illustrated the ways that literature could interact with science and assist in its progress; and how more recent writers offer critiques of science and its practitioners. Although media studies and digital humanities are established fields, their overlaps have not been examined in depth. This comprehensive collection fills that gap, giving readers a critical guide to understanding the array of methodologies and projects operating at the intersections of media, culture, and practice. Topics include: access, praxis, social justice, design, interaction, interfaces, mediation, materiality, remediation, data, memory, making, programming, and hacking. This volume provides practical, but provocative, case studies of exemplary projects that apply digital technology or methods to the study of religion. An introduction and 16 essays are organized by the kinds of sources digital humanities scholars use - texts, images, and places - with a final section on the professional and pedagogical issues digital scholarship raises for the study of religion. Second language

classrooms provide unique opportunities for intellectual growth, cognitive skill development, and cultural exchange. In *Integrating the Digital Humanities into the Second Language Classroom*, Melinda A. Cro makes the case for bringing the digital humanities (DH) into that sphere, strengthening students' language skills while furthering their critical thinking and research abilities. Written as a practical guide for language instructors new to DH, Cro addresses practitioners' most common questions: What are the benefits of DH for language learning in particular? How can DH be used at different levels of instruction? What types of DH tools are out there, and what kinds of knowledge must students and teachers bring to the table? *Integrating the Digital Humanities into the Second Language Classroom* is filled with real-world examples and concrete recommendations, making it an ideal introduction for language teachers intrigued by the potential of DH.

The ninth edition of *CULTURE AND VALUES: A SURVEY OF THE HUMANITIES* introduces students to the history of humankind through the lens of the humanities -- language and literature, art and architecture, music, philosophy, and religion -- from the dawn of civilization to the contemporary world. *CULTURE AND VALUES* encourages students to place their own backgrounds and beliefs in context and consider how understanding both their own and other heritages contributes to becoming a citizen of the world in the 21st century. Coauthor Lois Fichner-Rathus continues to bring her pedagogical expertise, clear conversational style, and love of teaching to this beautifully written and illustrated book. New and revised features encourage

students to draw comparisons and connections as well as engage their critical thinking skills. Chapter previews, timelines, glossaries, and "Big Picture" reviews provide consistent pedagogical support throughout the text to help students master the material. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Publisher description Theory has been used widely in the field of second language writing. Second language writing specialists—teachers, researchers, and administrators—have yet to have an open and sustained conversation about what theory is, how it works, and, more important, how to practice theory. Practicing Theory in Second Language Writing features fourteen essays by distinguished scholars in second language writing who explore various aspects of theoretical work that goes on in the field. This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday. The present three-volumes liber amicorum, several years in gestation, honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours. Yaacov's research has had a major impact not only within the walls of academia, but also in the daily life of lay users of such technology that originated from his research. An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s, a project in which he is currently involved is proving to be a sensation, as will become apparent from what follows. Yaacov Choueka began his research career in the theory of computer science, dealing with basic

questions regarding the relation between mathematical logic and automata theory. From formal languages, Yaacov moved to natural languages. He was a founder of natural-language processing in Israel, developing numerous tools for Hebrew. He is best known for his primary role, together with Aviezri Fraenkel, in the development of the Responsa Project, one of the earliest fulltext retrieval systems in the world. More recently, he has headed the Friedberg Genizah Project, which is bringing the treasures of the Cairo Genizah into the Digital Age. This second part of the three-volume set covers a range of topics related to the application of information technology in humanities, law, and narratives. The papers are grouped in topical sections on: humanities computing; narratives and their formal representation; history of ideas: the numerate disciplines; law, computer law, and legal computing. The humanities are alive. We see the great pyramids in contemporary design, we hear Bach in hip-hop and pop music, and we feel ancient religious themes and philosophies in our impassioned contemporary dialogues. Experience Humanities invites students to take note of the continual evolution of ideas and cross-cultural influences to better understand the cultural heritage of the West, and to think critically about what their legacy will be for future generations. Together with Connect® Humanities, a groundbreaking digital learning solution, students not only experience their cultural heritage, but develop crucial critical reading, thinking, and writing skills that will prepare them to succeed in their humanities course and beyond.
