Guidelines for Successful Acquisition and Management of Software Intensive Systems Jan 16 2020 "These guidelines cover the gamut of software-intensive systems acquisition and management activities, from pre-program strategic planning to post-deployment software support. They are divided into three essential areas for program success. Part I., Introduction, lays the groundwork. To be successful in software, you must have a basic understanding of why major software acquisitions fail and succeed, the unique DoD software acquisition environment, and software-intensive life cycles and methodologies. Part II., Engineering, provides the meat. World-class software must be engineered, which involves implementing a series of interrelated, interdependent concepts, disciplines, and activities. These include risk management, Ada, software development maturity, measurement and metrics, reuse, software tools, and software support. Part III, Management, brings it all together. To successfully manage a major software-intensive systems acquisitions, you must be an informed buyer. You must understand the software development process, software quality assurance, contract management techniques, and insist on continuous process improvement throughout the system's life. To step up to this challenge, you and your program will benefit by following the comprehensive software acquisition and management guidance found between these pages."--P. xxvi.

Comprehensive Guidelines for Prevention and Control of Dengue and Dengue Haemorrhagic Fever Aug 03 2021

Erosion and Sediment Control Guidelines for Earthworks Nov 13 2019

Infection Control Guidelines May 12 2022

FAO/WHO/OIE Guidelines for the Surveillance, Management, Prevention and Control of Trichinellosis Mar 18 2020

Infection control guidelines Jul 02 2021

Guidelines for Dengue Surveillance and Mosquito Control Apr 11 2022 Forty per cent of the worlds population live in areas where transmission of dengue infection occurs, with an estimated 50 million cases of infection each year. This publication contains guidelines for the prevention and control of dengue haemorrhagic fever, focusing on vector surveillance and control programmes, with priority given to simple environmental measures which individuals and communities can take to eliminate larval breeding. Aspects discussed include chemical and biological control methods, personal protection measures, space spraying, legislation, early recognition and treatment of cases, social mobilisation and communication.

Guidelines : Infection Control Guidelines for RNs and RPNs Jul 14 2022

6orkplace Prevention and Management of Acquired Immunodeficiency Syndrome (AIDS) and Human Immunodeficiency Virus Infections (HIV) Dec 15 2019 One of a series of infection control guidelines providing information on measures which should be taken to prevent the transmission of AIDS virus(HIV) infection in the community, in institutions and in workplaces. The impetus for these guidelines comes from a workshop sponsored in May 1986 by Manitoba Health, Communicable Disease Control, and the University of Manitoba Department of Continuing Education, with the basis for many of the guidelines in the Canada Diseases Weekly Report and Morbidity Mortality Weekly Report recommendations. An introduction to AIDS and the AIDS virus (HIV) infection, public education, management of possible workplace exposure to AIDS, and interim guidelines for hospitals, laboratories and pathologists are included, as well as a glossary.

Guidelines for Infection Prevention and Control Jan 20 2023 This essential publication, which it is mandatory for every practice to have onsite, describes the infection control processes that dental practitioners and clinical support staff are obliged to implement.

Clearance Draft Guidelines for the Evaluation and Control of Lead-based Paint Hazards in Housing Nov 25 2020

Infection Control Guidelines on the Management of Critical Adults with COVID-19 Aug 15 2022

Criminal Justice Research, Prevention and Control of Collective Violence, Volume V, Guidelines for Patrol Personnel Jan 28 2021

Infection Control Guidelines for the Funeral Industry Jun 20 2020

Guidelines for African swine fever (ASF) prevention and control in smallholder pig farming in Asia Jul 22 2020 African swine fever (ASF) is a highly fatal infectious disease of domestic and wild pigs of all breeds and ages with no effective vaccine or treatment. The incursion of ASF into Asia and the Pacific region has been a major concern as the region is the major pig production area, which produces over 58 percent of pigs globally (FAOSTAT). The concerns, therefore, are growing for its impacts on food security and economics as the virus is expanding towards more areas and countries in the region. As the disease continues to expand into new territories, preparedness and control activities need to be constantly adjusted to adapt to situations observed in the field that may be contrary to what was expected based on international standards or experiences from other parts of the world. National veterinary services face challenges in these complex situations, and so regional and international support is needed to fill capacity gaps required for ASF control and to facilitate dialogue among key stakeholders. Through various regional and national consultation meetings, affected countries have requested technical support to make available relevant technical guidelines for ASF control that are practical especially for smallholder pig farmers in the context of Asia (SO5). This Farm biosecurity, slaughtering and restocking] is the third of the series of the “Guidelines for African swine fever (ASF) prevention and control in smallholder pig farming in Asia” which guides biosecurity, slaughtering and restocking practice in smallholder pig farming system which are designed for use by national and/or central veterinary authorities, farmers and relevant stakeholders, especially focusing on Southeast Asian pig industry.

Pollution Control Guidelines for Coal Refuse Piles and Slurry Ponds May 20 2020

Guidelines for the Surveillance and Control of Anthrax in Humans and Animals Nov 18 2022

General Infection Control Guidelines for Law Enforcement Personnel Mar 30 2021

Modern Spacecraft Guidance, Navigation, and Control Feb 15 2020 *Modern Spacecraft Guidance, Navigation, and Control: From System Modeling to AI and Innovative Applications* provides a comprehensive foundation of theory and applications of spacecraft GNC, from fundamentals to advanced concepts, including modern AI-based architectures with focus on hardware and software practical applications. Divided into four parts, this book begins with an introduction to spacecraft GNC, before discussing the basic tools for GNC applications. These include an overview of the main reference systems and planetary models, a description of the space environment, an introduction to orbital and attitude dynamics, and a survey on spacecraft sensors and actuators, with details of their modeling principles. Part 2 covers guidance, navigation, and control, including both on-board and ground-based methods. It also discusses classical and novel control techniques, failure detection isolation and recovery (FDIR) methodologies, GNC verification, validation, and on-board implementation. The final part 3 discusses AI and modern applications featuring different applicative scenarios, with particular attention on artificial intelligence and the possible benefits when applied to spacecraft GNC. In this part, GNC for small satellites and CubeSats is also discussed. *Modern Spacecraft Guidance, Navigation, and Control: From System Modeling to AI and Innovative Applications* is a valuable resource for aerospace engineers, GNC/AOCS engineers, avionics developers, and AIV/AIT technicians. Provides an overview of classical and modern GNC techniques, covering practical system modeling aspects and applicative cases Presents the most important artificial intelligence algorithms applied to present and future spacecraft GNC Describes classical and advanced techniques for GNC hardware and software verification and validation and GNC failure detection isolation and recovery (FDIR)

Guidelines for Community Programs in High Blood Pressure Detection and Control. Prepared for the National High Blood Pressure Education Program by the National Heart & Lung Institute Jun 01 2021

Infection Control Guidelines Jan 08 2022 These clinical guidelines are divided into four major sections: Intravascular infections, surgical wound infections, nosocomial pneumonia and urinary tract infections.

Guidelines on Surveillance, Prevention and Control of Trichinellosis Feb 09 2022

Workshop on the Detection and Control of Epidemic Cholera Oct 17 2022

Hospital Infection Control Guidelines: Principles and Practice Sep 04 2021 This book *Hospital Infection Control Guidelines: Principles and Practice* aims to provide comprehensive, acceptable, implementable and effective guidelines on Infection Control in various healthcare facilities. The book deliberates on all aspects of infection control in healthcare facilities including prevention, processes, infrastructure and training. Analyses the existing guidelines on infection control and recommends micro- and macro-guidelines appropriate to healthcare facilities at various levels, i.e. primary, secondary and tertiary. As per the World Health Organization statistics, at any.
