Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews. The perception that our nation's public schools are disorderly and unsafe is widespread, and the image of the public school is deteriorating. Since 1974, the Gallup organization has gathered opinions about the public schools. The percentage giving the schools an "A" rating declined from 18% to 6% between 1974 and 1983 (Gallup, 1974, 1984). In a recent survey of America's teenagers, 9% gave the schools an "A" rating (Bahner, 1980, p. 106). Lack of discipline tops the list of the problems adults see facing schools, and class disturbances and theft are reported by teenagers to be "very big" or "fairly big" problems in their schools (Bahner, 1980, p. 107). These public perceptions are fostered by and reflected in national media attention ("City Schools in Crisis," 1977; "Help! Teacher Can't Teach!" 1980; "High Schools under Fire," 1977). Public concern is also reflected in Congressional hearings where testimony creates the image of grave disorder in our schools (U.S. Senate, Committee on the Judiciary, 1976a, 1976b; U.S. House of Representatives, Subcommittee on Elementary, Secondary, and Vocational Education, 1980). The public has given the schools low marks, and the Senate Judiciary Committee (1975) gave the schools an "A" in violence and vandalism. In short, parents, students, and public officials are alarmed at what they see as a rising tide of violence and disorder in the schools and are concerned

about how much learning can occur in a disruptive environment, and about the safety of teachers and students. The book makes it easy for you to find what effect environment has on the corrosion of metals and alloys. However, this volume offers information on additional environments including concrete, soil, groundwater, distilled water, sodium acetate and more. There is also updated and expanded coverage of previously discussed environments as well as information on environments which deal with the dairy, food, brewing, aerospace, petrochemical and building industries. The environments are listed alphabetically. Each listing includes a general description of the conditions, a comment on the corrosion characteristics of various alloys in such a situation, a bibliography of recent articles specific to the environment, tables consolidating and comparing corrosion rates at various temperatures and concentrations for various alloys, and graphical information. Also included are summaries on the general corrosion characteristics of major metals and alloys.

This latest edition incorporates the many changes in the specifications and designations of nonferrous alloys that have occurred over the past five years. The volume features over 20,000 alloy designations, including a complete listing of UNS designations for nonferrous alloys and comprehensive treatment of current European and Japanese standards. It covers more countries, more alloys, and more standards than previous editions, while keeping obsolete designations for those persons trying to duplicate equipment from old documents. This comprehensive volume is well-indexed with easy-to-use cross references that make short work of looking up equivalents for a material specification or designation.

provides valuable composition tables that allow you to compare similar alloys. Tensile properties and product forms are provided when available.
