The new global cancer data suggests that the global burden has risen to 18.1 million new cases per year and 9.6 million cancer deaths per year. A number of factors appear to be driving this increase, in particular, a growing and aging global population and an increase of exposure to cancer risk factors linked to

social and economic development. For rapidly-growing economies, the data suggests a shift from poverty- or infection-related cancers to those associated with lifestyles more typical in industrialized countries. There is still large geographical diversity in cancer occurrence and variations in the magnitude and profile of the disease between and within world regions. There are specific types of cancer that dominate globally: lung, female breast and colorectal cancer, and the regional variations in common cancer types signal the extent to which societal, economic and lifestyle changes interplay to differentially impact on the profile of this most complex group of diseases. Unfortunately, despite advances in cancer care, a significant proportion of patients at home, experience sub-optimal outcomes. Barriers to successful treatment outcomes include, but are not limited to: access to oncologists in the primary health centers, non-adherence, lack of experienced oncology and palliative care nurses in the community, inadequate monitoring and the lack of training of family and pediatric physicians. Telemedicine approaches, including telephone triage/education, telemonitoring, teleconsultation and status tracking through mobile applications, have shown promise in further improving outcomes, in particular for chronic cancer patients following their hospitalization. Lessons can be learned from existing hospices in North America, the United Kingdom, Australia, Centers of Excellence in African (Uganda) and modern community services in India (Kerala). An important goal of this book is to describe and encourage professionals to develop new community programs in palliative care, which include training and empowering physicians and nurses in the community on the principles of palliative care. The Middle East Cancer Consortium (MECC) together with the American Society of Clinical Oncology (ASCO) and the American Oncology Nursing Society (ONS) have conducted multiple courses ranging from basic palliative care to more specialized training in palliative care for multiple nationalities in Europe, Asia and Africa. Our experience clearly indicates that, to promote such activities, one needs strong leadership and confirmed political will to support the endeavor. The new book will emphasize the importance of having a core of multiple stakeholders including community leaders, government, NGOs and media to be actively involved in advocating for the cause and generating public awareness. This text will provide the reader with a comprehensive understanding of the outside-of-the-hospital treatment of cancer patients by medical, paramedical and volunteer personnel. In doing so, this text will encourage the creation of new palliative care services improving upon the existing ones and stimulate further research in this field. Part 1 of the text will begin with an overview of the current state of affairs of services provided to cancer patients while being cared for by primary health centers. It will also review the current literature regarding medical and psychological-based therapy options in the community for cancer patients at different stages of their disease. Part 2 will address the unique role of the community nurse, within the framework of the multidisciplinary team treating the patient, in the attempt to provide optimal evaluation and care in very challenging situations (such as with terminal patients). Part 3 will provide insightful models of this new discipline and serve as a valuable resource for physicians, nurses, social workers and others involved in the care of cancer patients. The book will take a multidisciplinary approach,

integrating clinical and environmental data for practical management to enhance the efficacy of treatment while relieving suffering. Part 4 will also discuss the application of modern technological approaches to track symptoms, quality of life, diet, mobility, duration of sleep and medication use (including pain killers) in chronic cancer patients in the community. Part 5 of the book will also be devoted to modes of developing a collaborative program between governmental and non-governmental organization sectors. This includes volunteer workers in close collaboration with medical professionals for providing emotional and spiritual support, nursing care, nutritional support and empowering family caregivers. Such a model makes palliative care in the community a "people's movement", thus transferring part of the responsibility and ownership to the community. Published by the Boy Scouts of America for all BSA registered adult volunteers and professionals, Scouting magazine offers editorial content that is a mixture of information, instruction, and inspiration, designed to strengthen readers' abilities to better perform their leadership roles in Scouting and also to assist them as parents in strengthening families. Device miniaturization, wireless computing, and mobile communication are driving ubiquitous, pervasive, and transparent computing. Supporting these rapidly evolving technologies requires middleware solutions that address connectivity-level, location-dependent, and context-dependent issues. The Handbook of Mobile Middleware is an exhaustive overview of recent developments in the various fields related to this infrastructure software. Authored by internationally recognized experts, this advanced reference integrates valuable insight gained from actual system deployments. It begins by presenting mobile middleware requirements and technologies, then offers solutions organized by such challenges as mobility/disconnection handling, location-based support, and context-based support. This volume focuses on the application domains in which mobile middleware has demonstrated its feasibility and effectiveness and details the pros, cons, and trade-offs of each solution. The book also analyzes future directions of mobile applications, including wearable computing, ubiquitous entertainment, and context-dependent distribution. Comprehensive, critical and accessible, Criminology: A Sociological Introduction offers an authoritative overview of the study of criminology, from early theoretical perspectives to pressing contemporary issues such as the globalisation of crime, crimes against the environment, terrorism and cybercrime. Authored by an internationally renowned and experienced group of authors in the Department of Sociology at the University of Essex, this is a truly international criminology text that delves into areas that other texts may only reference. It includes substantive chapters on the following topics: • Histories of crime; • Theoretical approaches to crime and the issue of social change; • Victims and victimisation; • Crime, emotion and social psychology; • Drugs, alcohol, health and crime; • Criminal justice and the sociology of punishment; • Green criminology; • Crime and the media; • Terrorism, state crime and human rights. The new edition fuses global perspectives in criminology from the contexts of post-Brexit Britain and America in the age of Trump, and from the Global South. It contains new chapters on cybercrime; crimes of the powerful; organised crime; life-course approaches to understanding delinquency and desistance; and futures of crime, control and criminology. Each chapter includes a series of critical thinking questions, suggestions for further study and a list of useful websites and

resources. The book also contains a glossary of the criminological terms and concepts used in the book. Patient-centered medicine is not an illness-centered, a physician-centered, or a hospital-centered medicine approach. In this book, it is aimed at presenting an approach to patient-centered medicine from the beginning of life to the end of life. As indicated by W. Osler, "It is much more important to know what sort of a patient has a disease than what sort of a disease a patient has." In our day, if the physicians and healthcare professionals could consider more than the diseased organ and provide healthcare by comforting the patients by respecting their values, beliefs, needs, and preferences; informing them and their relatives at every stage; and comforting the patients physically by controlling the pain and relieving their worries and fears, patients obeying the rules of physicians would become patients with high adaptation and participation to the treatment. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. The fourth edition of this text constitutes a continuation of 20 years of coverage of traumatic brain injury, and broadens the discussion of acquired brain injury. Within TBI, the paradigm shift from an injury occurring at a point in time to a disease entity of a chronic nature is changing the discussion of diagnosis, management, treatment and outcome assessment. Disease specification that differentiates TBIs by the mechanism of injury, the exact nature of the injury, the extent of injury, presence of co-morbidities and their exact nature, gender, age, race, and genome are emerging as crucial. Disease differentiation has impacted diagnosis, treatment and outcome. The Work and Family Handbook is a comprehensive edited volume, which reviews a wide range of disciplinary perspectives across the social sciences on the study of work-family relationships, theory, and methods. The changing demographics of the labor force has resulted in an expanded awareness and understanding of the intricate relations between work and family dimensions in people's lives. For the first time, the efforts of scholars working in multiple disciplines are organized together to provide a comprehensive overview of the perspectives and methods that have been applied to the study of work and family. In this book, the leading work-family scholars in the fields of social work, psychology, sociology, organizational behavior, human resource management, business, and other disciplines provide chapters that are both accessible and compelling. This book demonstrates how cross-disciplinary comparisons of perspective and method reveal new insights on the needs of working families, the challenges faced by those who study them, and how to formulate policy on their behalf.
