Collaboration across Health Research and Medical Care Dec 07 2021 Health research and health care practice are radically transforming as governments invest more in large scale, national and international health projects with increasing levels of interdisciplinarity as populations age and as nations grow wealthier. This volume examines the structures and dynamics of scientific collaboration in health research and health care. Bringing together detailed research from the US, Canada, Europe and Japan, Collaboration Across Health Research and Medical Care sheds light on the features, environments and relationships that characterise collaboration in health care and research, exploring changing patterns of collaboration and examining the causes and consequences of team work

in the health domain. With attention to the increasingly porous boundaries between health care and research, the book not only investigates research settings, but also considers the manner in which knowledge produced in laboratories and clinics is translated into day-to-day medical and care practice and health initiatives. It offers a rich examination of the political, technical and organisational facets of collaboration and the implications of changes in collaboration for every day treatment and practice, *Collaboration Across Health Research and Medical Care* will be of interest to scholars of sociology and science and technology studies, as well as those working in the field of health policy and research.

Bamboo, Considered as a Paper-making Material Dec 19 2022 Bamboo, Considered as a Paper-Making Material by Thomas Routledge is about the use of the bamboo plant as paper. Excerpt: "Of all the fiber-yielding

plants known to botanical science there is not one so well calculated to meet the pressing requirements of the Paper-trade as "Bamboo," both as regards facility and economy of production, as well as the quality of the "Paper-Stock" which can be manufactured therefrom: grown under favorable conditions of climate and soil, there is no plant which will give so heavy a crop of available fiber to the acre, no plant which requires so little care for its cultivation and continuous production."

Paper and the British Empire Oct 05 2021 Paper and the British Empire examines the evolution of the paper industry within British organisational frameworks and highlights the role of the Empire as a market and business-making area in a world of shrinking commerce and rising trade barriers. Drawing on a valuable range of primary sources, this book covers the period 1861-1960 and examines events from the establishment of free trade backed by the gold standard to Britain's membership of the European Free Trade Association. In the field of the paper industry, the speed and intensity of the industrialisation process around the globe have been shaped by a wide variety of variables, including the surrounding institutional framework; entrepreneurial and organisational strategies; the cost and accessibility of transport; and the availability of capital, knowledge, energy resources, and technology. The supply of papermaking raw materials has also been key and has historically been the most important determinant for geographical location and dominance. The research in this work focuses on the roles played by such variants, on the one hand, and demand characteristics on the other. In particular, it considers developments connected to a quest for Empire-grown raw materials in order to tackle the problem of the lack of indigenous raw materials and the resulting dependence on Scandinavian wood pulp imports. This text is of considerable interest to advanced students and researchers in economic history, business history, and the paper industry, and will also be useful to organisations working within the pulp and paper industries.
